Choosing the right sunscreen can help reduce the risk of skin cancer and early skin aging caused by the sun.

**SUNSCREEN IS AN IMPORTANT TOOL**
in the fight against skin cancer, including melanoma, the deadliest form of skin cancer.

**1 in 5** Americans will be diagnosed with skin cancer in their lifetime.

The American Academy of Dermatology recommends consumers choose a sunscreen which states on the label:

- **SPF 30 OR HIGHER**
- **BROAD SPECTRUM**
  - Means a sunscreen protects the skin from ultraviolet A (UVA) and ultraviolet B (UVB) rays, both of which can cause cancer.
- **WATER RESISTANT**
  - For up to 40 or 80 minutes. Sunscreen can no longer claim to be waterproof or sweatproof.

**ONE OUNCE OF SUNSCREEN**, enough to fill a shot glass, is considered the amount needed to cover the exposed areas of the body.
