Pedestrian safety is as easy as...

...a few simple steps.

UCI Parking & Transportation is committed to providing a safe environment for everyone as you make your way about campus – whether you choose to drive, bike or walk. New signage and stenciling on campus paths is one more step in this direction.

You can do your part by staying in your designated lane and practicing good Safety Etiquette. Attention to your surroundings as you go about will keep everyone safer and reduce stress. For more tips and a map of campus pathway designations, visit bike.uci.edu today.

No matter what mode of transportation you use to get around campus, you are a pedestrian at some point in your trip. It is important to be aware of the responsibilities you have as a pedestrian in maintaining a safe and efficient traveling environment. You can do your part by not walking on the streets or bike lanes. Attention to your surroundings and good safety etiquette will keep everyone safe.

Drivers beware. When you are driving your vehicle, stay out of bike lanes and always check your blind spots for bicyclists and pedestrians. There will always be a degree of unpredictability in your surroundings. Stay alert!

Skateboards and skate devices are permitted in designated areas only.

**Simple steps you can take:**

**Share the path**
Abide by posted signage and path markings. Stay to the right, be responsible, and always share the path. Bicyclists and in-line skaters should pass on the left.

**Use the Ring Mall**
Help alleviate congestion on the shared paths by traveling on Ring Mall when possible.

**Be alert**
Walk defensively and be ready for unexpected events. Don’t count on other path users always paying attention. Cyclists use bells and vocal cues, so make sure you can hear approaching traffic by removing your headphones.

**Be predictable**
Acknowledge others, and try to use eye contact and other body language to communicate your presence to other path users. Check for bikes before crossing paths. Any movement a pedestrian makes that a bicyclist isn’t expecting could be dangerous.

**Adjust your route**
Plan your route according to current conditions; the shortest route is not always the safest. Steer clear of poorly lit or secluded paths at night, and avoid construction zones altogether when possible.

**Be careful in parking lots**
Watch out for parked cars that may suddenly back out of a space. Avoid walking in the middle of drive aisles.
