One-tenth of all workplace fatalities are due to electrical accidents. Common hazards include:

- Power plug strips connected to one another
- Extension cords used as a permanent power source
- Overloaded circuits

Take Precautions:

- Operate according to instructions
- Check cords & plugs before use
- Turn off power when troubleshooting
- Unplug & tag broken equipment, & have it repaired by qualified personnel
- If equipment is locked or tagged out, do not attempt to unlock or remove locks or tags
- SOS Reps: post this flyer & complete the Hazard Identification Checklist, to identify unsafe electrical safety conditions in your work unite
