Even though we live in “sunny” California, winter weather hazards result in thousands of motor vehicle accidents each year:

- Heavy fog can reduce driving visibility
- Rain can make roads slick & slippery
- Cold weather can affect the operation of your vehicle

Solution:

- Plan ahead & consider delaying your trip if the weather is bad
- Turn on your headlights when visibility is limited
- Speed limits are for ideal conditions — reduce your speed in the rain & increase the distance between you & the vehicle ahead
- Maintain your vehicle & regularly check your tires, brakes, wipers, defroster, heater & exhaust systems
- SOS Representatives: Post this flyer & encourage employees who drive university vehicles as a job requirement to attend Defensive Driving training
